Google Ads Search Campaign Audit

Performance review across 720 campaign records · Prepared by Ashwin Kumar

1. Executive Summary

Average ROAS	Average CPA	Average CTR
4.11x	**$64.06**	**3.99%**
vs benchmark 4.50x · 9% below	vs benchmark $45.27 · 42% above	vs benchmark 2.69% · 48% above

- Click engagement is strong — average CTR of 3.99% sits well above the 2026 Search benchmark of 2.69%, indicating headlines and audience targeting are working.
- Conversion economics are weaker than they should be — average CPA of $64.06 is 42% above the global Search benchmark of $45.27, and 281 of 720 records (39%) are flagged.
- Roughly $2.46M of $6.35M total spend (38.7%) sits inside underperforming campaigns that returned only 1.12x ROAS — a clear pool of spend to reallocate.
- Display and Shopping are the lowest-ROAS campaign types (3.68x and 3.75x); Search leads at 4.79x, indicating the strongest path to scaling is doubling down on intent-driven Search.
- The top 10 highest-spend low-ROAS rows alone consumed $307.7K and returned only $330K — pausing or restructuring these is the single fastest efficiency win.

2. Campaign Performance Overview

Campaign Type	Total Spend	Total Conv.	Avg CTR	Avg CPA	Avg ROAS	Avg CVR	Flagged
Search	$1,629,526	36,827	4.06%	$57.73	4.79x	4.67%	65 / 192
Video	$1,664,049	34,551	3.95%	$65.78	4.14x	4.42%	73 / 186
Shopping	$1,574,542	30,419	3.98%	$68.15	3.75x	4.49%	70 / 168
Display	$1,481,153	29,301	3.95%	$65.28	3.68x	4.52%	73 / 174
Total	**$6,349,269**	**131,098**	**3.99%**	**$64.06**	**4.11x**	**4.53%**	**281 / 720**

3. Key Findings

Display delivers the weakest return on every dollar

Evidence. Average ROAS 3.68x and CPA $65.28 across 174 records, with 73 flagged (42%) — below the 4.5x e-commerce benchmark. Likely cause. Display interrupts users mid-browse, so intent is lower; weak creative or audience tuning compounds the gap quickly. Why it matters. Display absorbs $1.48M (~23% of Google Ads spend) at the lowest efficiency — the largest single drag on blended ROAS.

A concentrated tail of high-cost, low-ROAS rows is bleeding margin

Evidence. 135 records carry both Underperforming and High Cost flags, averaging ROAS 1.37x and CPA $136.39 — over 2x the account average. Likely cause. Typically a mix of broad keyword targeting, missing negatives, and weak landing pages — spend continues without recovering revenue. Why it matters. Together they represent ~$1.99M of spend at sub-2x return, the clearest pool to pause or reallocate to Search.

Shopping CPA is structurally above benchmark despite healthy CTR

Evidence. Shopping shows CTR 3.98% but average CPA $68.15 (50% above the $45.27 benchmark) and ROAS 3.75x across 168 records. Likely cause. High CTR with weak CPA points to post-click friction — feed quality, pricing parity, mobile UX, or checkout drop-off. Why it matters. Shopping carries $1.57M in spend; a 15% CPA reduction would meaningfully lift blended ROAS without changing media mix.

4. Visual Evidence

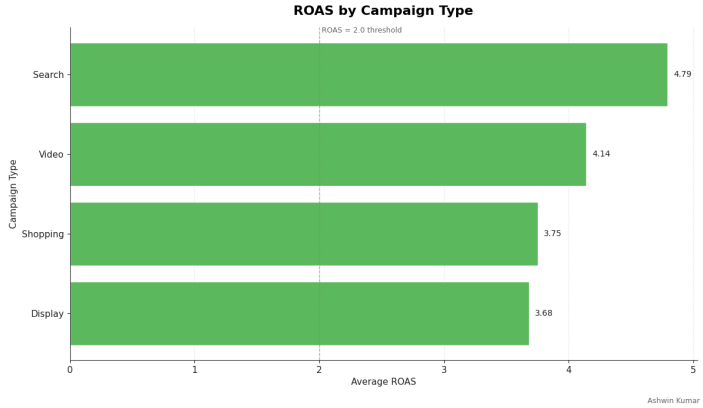

Figure 1. ROAS by Campaign Type — Display and Shopping trail Search.

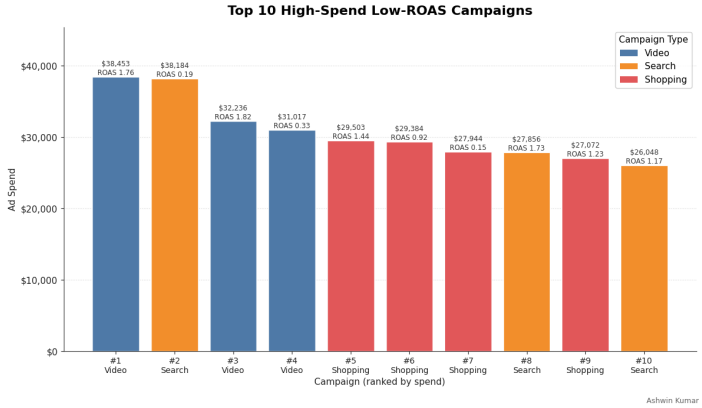

Figure 2. Top 10 High-Spend Low-ROAS Campaigns — concentrated waste.

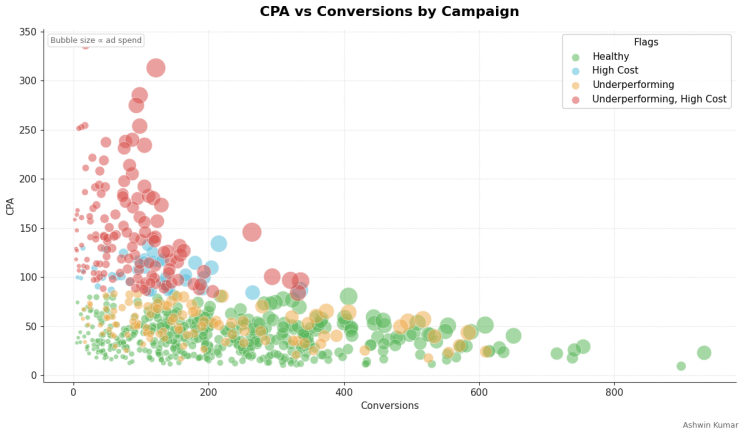

Figure 3. CPA vs Conversions by Campaign — flagged rows cluster in the high-CPA, low-conversion quadrant.

5. Fix Recommendations

#	Action	Reason	Target Metric	Uplift	Priority
1	Pause or restructure the 135 Underperforming + High Cost rows; reallocate budget to top-quartile Search.	These rows return only 1.37x ROAS at $136.39 CPA — well below benchmark and account average.	Blended ROAS, CPA	+15–25%	**P0 Critical**
2	Add negative keyword sets and tighten match types on Search and Shopping; rebuild ad relevance for top 20 spenders.	Weak ad relevance and missing negatives are the most common drivers of high CPA at acceptable CTR.	Quality Score, CPA	+8–12%	**P1 High**
3	Audit and fix Shopping landing pages (mobile speed, trust signals, checkout); validate conversion tracking end-to-end.	High CTR with weak CPA on Shopping points to post-click friction, not media issues.	Conversion Rate, CPA	+6–10%	**P1 High**

6. 30-Day Action Plan

Week	Focus	Key Actions
Week 1	Tracking and keyword cleanup	Validate conversion tracking; pull search-term reports for the 135 flagged rows; build a master negative keyword list at account level; tighten match types on broad-only ad groups.
Week 2	Ad copy and landing page fixes	Rewrite headlines for low-Quality-Score ad groups; align landing pages with top 20 keyword themes; fix mobile speed, trust signals, and checkout friction on Shopping pages; A/B test two RSA variants per priority ad group.
Week 3	Budget reallocation and bid adjustments	Pause the bottom-decile Underperforming + High Cost rows; shift freed budget into top-quartile Search; tighten device, geo, and audience bid modifiers; cap Display to remarketing-only audiences.
Week 4	Test review and scaling decision	Review CPA, ROAS, and CVR deltas vs. baseline; promote winning ad and landing-page variants to 100% traffic; lock new budget allocations; document scaling thresholds (ROAS ≥ 4.0x, CPA ≤ benchmark) for the next cycle.
